

Managed NaaS for SD-WAN

The superior alternative to traditional WAN solutions

Financial institutions are constantly looking to simplify their branch network and optimize bandwidth. With cloud-based apps and guest-centric services increasing network demand, banks and credit unions need a comprehensive and cost-effective WAN solution that maximizes the availability of business internet.

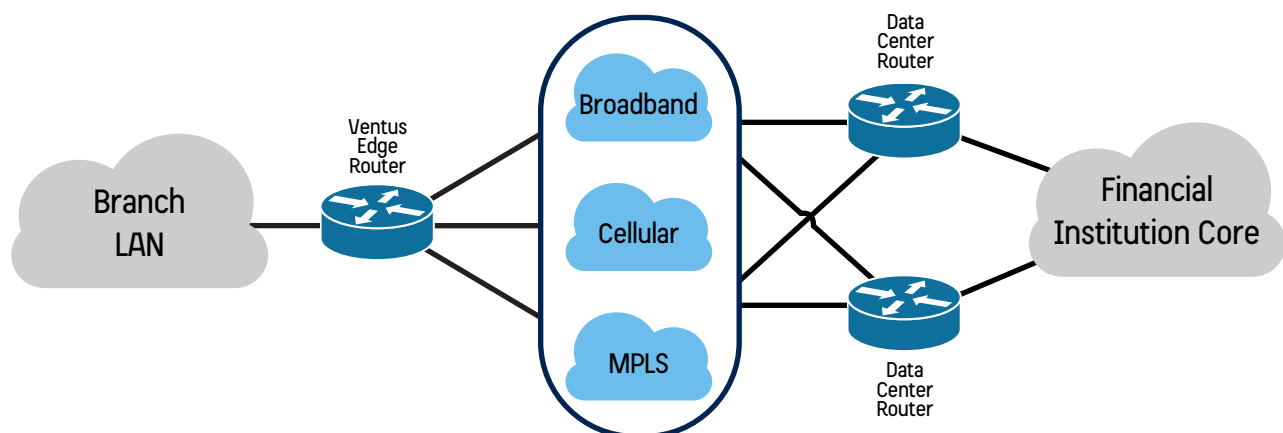

The next-generation WAN solution

Ventus Managed NaaS for SD-WAN delivers a dramatically more efficient alternative to traditional WAN. SD-WAN optimizes traffic flow at the application level (video, Wi-Fi, ATM, VoIP, security, etc.), distributing the traffic efficiently over multiple logical WAN segments including MPLS, broadband, and cellular. Each segment has a different topology and is securely isolated from the others. Ventus SD-WAN helps financial institutions reduce costs, streamline resources, and get the most out of their network.

Ventus SD-WAN features:

- Zero-touch, small form-factor hardware
- 99.99% SLA, superior efficiency and performance
- 60% lower costs with tangible ROI
- Optimized network traffic distribution
- Seamless integration with legacy networks
- Fully-managed by Ventus

Dynamic WAN path control enables any combination of circuits

Managed Network-as-a-Service

Businesses depend on their network to drive applications, improve communication, and better serve customers. Ventus Managed NaaS solutions offer always on connectivity, advanced end-to-end security, and consistent reliability, ensuring distributed enterprises get the most out of their network.

Ventus Managed NaaS solutions are built and managed by Ventus networking experts, ensuring businesses in finance, retail, healthcare, hospitality, and other sectors achieve secure, persistent connectivity for networked applications at distributed branch and office locations. From high-level software-defined networking to mission critical IoT services, Ventus Managed NaaS solutions are scalable to meet specific business needs of any scope.

Managed NaaS solutions are deployed and managed end-to-end, and include pre-configured hardware, dedicated client teams, continuous monitoring, and 24x7 technical support.

Networking experts

Our engineers design and architect a fully integrated network tailored to meet your specific business needs.

Our promise to you

All Ventus managed solutions include dedicated client teams, continuous monitoring, service level agreements, and 24x7 technical support.

Genesis™ Network Monitoring

Ventus' proprietary monitoring platform that offers intelligent device and connection management, maximizing business uptime and efficiency.

Comprehensive coverage

Extensive wireless and fixed line coverage gives your business ultimate connectivity flexibility.

Top applications

- Multiple endpoints
- Branch/Office/Remote location
- ATM/Kiosk/POS
- Digital signage/Video
- IoT/M2M
