

V2000 Networking Router

Broadband | XLTE | 4G LTE | HSPA+ | 3G | CDMA | GSM

V2000

The V2000 router delivers always on connectivity in a compact size ideal for distributed enterprise. Supporting both broadband and wireless connectivity, the V2000 offers maximum network flexibility with secure VPN functionality. The router's intelligent hardware and software enable full interoperability with other leading enterprise equipment brands, helping enterprise and SMBs simplify their network architecture.

Features

- Multiple Interfaces: 2 port Ethernet (WAN & LAN 10/100 MBps), USB
- Physical Security: Embedded tilt sensors alert for tampering or vandalism
- Networking Security: PCI-DSS compliant, high level encryption, stateful firewalls, and active intrusion detection
- Network Failover Configurations: Maintains always on connectivity via wireless when primary network fails, then automatically switches back once primary service returns
- Optimize Connectivity: Engineered analytics track and mitigate: latency, environmental radio frequency interference, and tower congestion
- Exterior Design: Rugged, industrial grade ABS plastic construction and magnetic base for easy installation

Applications

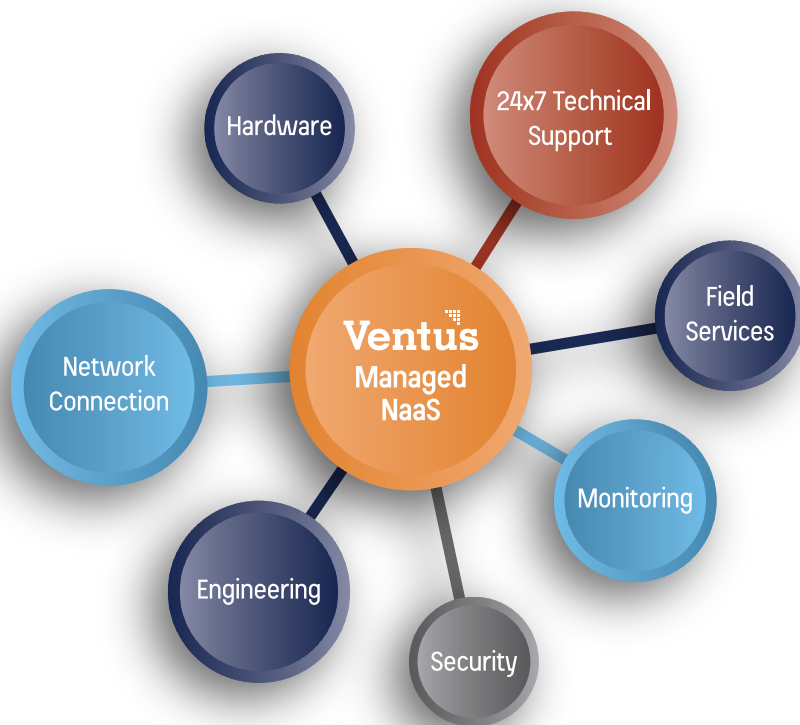

- Workstations
- VoIP
- POS
- Failover
- Surveillance
- Kiosks
- ATMs
- Digital Signs
- Gaming & Lottery Terminals
- Alarm Panels

Managed Network-as-a-Service

Businesses depend on their network to drive applications, improve communication, and better serve customers. Ventus NaaS solutions offer always on connectivity, advanced end-to-end security, and consistent reliability, ensuring distributed enterprises get the most out of their network.

Ventus NaaS solutions are built and managed by Ventus networking experts, ensuring businesses in finance, retail, healthcare, hospitality, and other sectors achieve secure, persistent connectivity for networked applications at distributed branch and office locations. From high-level software-defined networking to mission critical IoT services, Ventus NaaS solutions are scalable to meet specific business needs of any scope.

NaaS solutions are deployed and managed end-to-end, and include pre-configured hardware, dedicated client teams, continuous monitoring, and 24x7 technical support.

Networking experts

Our engineers design and architect a fully integrated network tailored to meet your specific business needs.

Our promise to you

All Ventus managed solutions include dedicated client teams, continuous monitoring, service level agreements, and 24x7 technical support.

Genesis™ Network Monitoring

Ventus' proprietary monitoring platform that offers intelligent device and connection management, maximizing business uptime and efficiency.

Comprehensive coverage

Extensive wireless and fixed line coverage gives your business ultimate connectivity flexibility.

Top applications

- Multiple endpoints
- Branch/Office/Remote location
- ATM/Kiosk/POS
- Digital signage/Video
- IoT/M2M
