Managed Network-as-a-Service for Wi-Fi
Secure and reliable high-bandwidth Wi-Fi

The near-constant use of mobile devices in everyday life is accelerating demand for quality internet access wherever people go. As a result, guest-focused, technologically-savvy restaurant chains are turning to managed Wi-Fi to deliver a highly satisfying and engaging next-generation dining experience.

Best-in-Class Wi-Fi with Dynamic Customer Analytics

Ventus Managed NaaS for Wi-Fi offers reliable, high-bandwidth Wi-Fi for your guests and insightful analytics capabilities for your business. In addition to providing secure, high-availability coverage, the solution's intelligent Wi-Fi devices log real-time data, providing reports on dwell times, heat maps, and visitor counts. These features enable restaurants to better understand the guest experience to improve loyalty and increase sales.

Benefits

- 100% managed by Ventus
- Full visibility across entire chain portfolio
- Designed to meet your specific Wi-Fi needs
- Insightful dining behavior & trend analytics
- Installation services available
- SSID and White/Black list management
- PCI DSS Level 1 certified cloud network platform

Ventus Managed Network-as-a-Service (NaaS)

Ventus Managed NaaS for Wi-Fi is an end-to-end solution that helps restaurant businesses achieve complex networking and integration goals without overloading internal IT resources. Ventus' knowledgeable and responsive networking experts and dedicated client care teams handle all the critical details of network management, including engineering, hardware provisioning, installation & maintenance, network security, ongoing monitoring, and 24x7 technical support.

Get the Right Solution for Your Retail Portfolio

Ventus Managed NaaS for Wi-Fi is fully scalable, with three solution tiers to choose from, whether you need a simple access point, advanced payment security protection, or something more customized.

| Equipment	Ventus | **Pro** Access Point	Ventus | **Pro+** Access Point Firewall/Security Appliance	Ventus | **Enterprise** Access Point Firewall/Security Appliance Software-Defined Networks
