Ventus
Global Network Solutions

Intelligent network monitoring

Network status awareness is vital to remote IoT operations and achieving high-level customer satisfaction and retention. Ventus Managed NaaS engineers will identify and resolve network and hardware problems before they affect digital signage operations. Ventus is your single resource for monitoring every aspect of network infrastructure from endpoint to endpoint. Attain consistent, high levels of network availability with Genesis™, our robust web-based network monitoring and management tool.

- Web-based, secure monitoring platform
- Real-time network alerts
- Web-based GUI for remote monitoring
- Reporting, analytics, and custom alerts
- Automatic OTA software updates
- Ability to integrate into existing network monitoring platforms

Network Failing?
How Managed NaaS removes that risk.

Service Selection
Site surveys to ensure that the appropriate best-in-class network is installed the first time

Continuous Monitoring
Pre-empt fluctuating network connections, know the trouble spots ahead of time

24×7×365 Technical Support
One-call resolution with insight into router's behavior and network availability over time to ensure the appropriate prescription for resolution
